

SpyON

SXP500 - Solana synthetic-market safety lab

PUBLIC DEMO

0 USD MVP

OPEN-SOURCE REFERENCE IMPLEMENTATION

Transparent collateral. Deterministic settlement. No broker in the technical path.

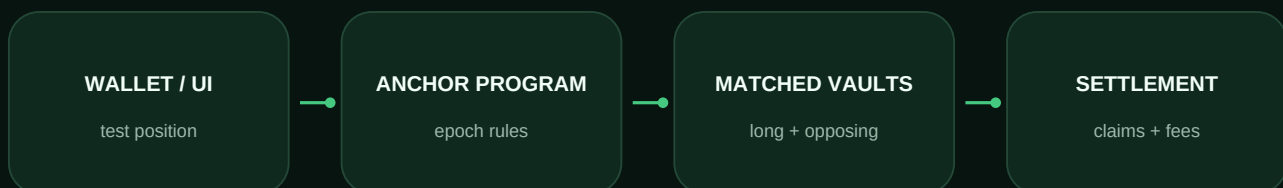

SCAN THE LIVE DEMO

browser-only / valueless

SpyON demonstrates a matched long/opposing vault model on Solana using valueless test assets. It makes solvency, caps, oracle guards, fees and claims inspectable instead of hiding them behind a price-pegged token.

CORE FLOW

EVIDENCE AVAILABLE NOW

32

Node / TypeScript tests
passing

5

Rust unit tests passing

4

Anchor local-validator
scenarios

HTTP 200

Public demo verified and exercised

VERIFIED DEMO OPERATION

0.01 DEMO BTC

-> 7.950639797 SXP

25 bps fee / browser ledger / conversion history / balances reset on reload

A public-good path from Devnet to audit readiness

Mainnet and real funds remain disabled. Funding is requested for evidence, hardening and independent review - not for liquidity or guaranteed returns.

SECURITY MODEL

- Long principal limited by opposing collateral
- Integer-only settlement and fee math
- Capped returns and pro-rata claims
- Oracle freshness and confidence breakers
- Separated treasury and insurance balances
- Pause and authority controls
- AI is read-only: no key, signer or override

SOLANA FOUNDATION REQUEST

\$45,000

milestone-based / open-source deliverables

M1	\$5k	Public Devnet release
M2	\$10k	Oracle + adversarial tests
M3	\$25k	Independent audit + retest
M4	\$5k	SDK + public readiness kit

INDEPENDENT AUDIT SCOPE

1,376 lines of Rust / Anchor

PDA and account substitution / SPL validation / collateral conservation / oracle replay and confidence / epoch ordering and double claims / authority controls / swap slippage / extreme economic scenarios

COLOSSEUM FOUR-WEEK SPRINT

W1 Devnet evidence / W2 oracle hardening / W3 external testnet partners / W4 threat model, pitch and walkthrough
